

# X-PcRouter

“Fast & Secure Digital Forms Transfer ”

## What is X-PcRouter?

X-PcRouter is a Windows application that runs on a PC/Laptop, which allows your device to transfer digital pen data (received via USB from the digital pen connected to the PC/Laptop) from your device to the X-Station Cloud Platform using your device's internet connection.

## How does it work?

1

Download and Install App

2

Fill out form with digital pen

3

Transfer data from digital pen to computer via USB

4

Transfer files to X-Station for processing

# Features and Functionality

## Security and Encryption

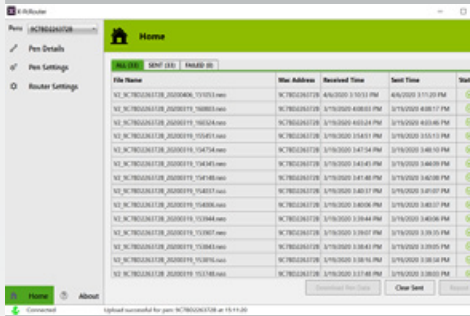

1

All Data is securely transferred over https and encrypted using Advanced Encryption Standard (AES) and a 256-bit key

## Simple, User-Friendly Interface

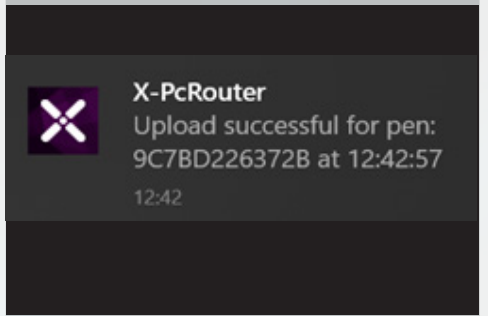

2

X-PC Router features a simple interface that is easy to use and understand

## Provides Notifications of Successful Send or Failure

3

The app displays Windows notifications in the taskbar area for forms that have been successfully sent or have failed.

## Automatic Resend of Forms if Failed

4

If a form has failed to be sent due to a lack of Internet Connectivity, X-PcRouter will try to resend the form based on the retry period that has been configured.

## Change Digital Pen Power Settings

5

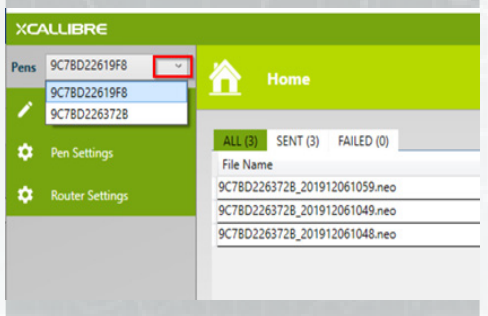

Allows the following Power settings to be changed:

- Auto Power On-the pen will power on when it comes into contact with a form.
- Auto Power Off Time the pen will power off after it has been inactive for the amount of time set.

## Ability to Connect Multiple Digital Pens

6

Multiple Digital Pens can be connected and can be managed via x-pc router
